[www.seconddecimal.com](http://www.seconddecimal.com)

**RatePoint™ is a proprietary tax rate file that includes North American sales and use rates for The United States, Canada, Native American Reservations, Puerto Rico, and the outlying U.S. Territories.**

The file's jurisdictions include break-outs by country, state, province, county, city, and multiple districts. District rates include, but are not limited to:

- Alabama Police Jury
- Regional Transportation Authorities
- Metropolitan Transportation Authorities
- Water Commissions
- Special Purpose Districts
- Mass Transit Authorities
- School, Fire and Drainage Districts
- Capital Projects
- Library and Hospital Districts

The file is based on US Postal Service (ZIP) and Geographic Names Information System (GNIS) supported geocodes, and contains over 66,000 distinct geocodes and ZIP combinations. It also includes special rates for maximum taxing and tax thresholds, as well as historical rate data.

Second Decimal provides regular periodic updates to the RatePoint™ data as needed. The files can be delivered with an initial "full/master" data file containing all of the current data for every jurisdiction, and then supplied in incremental updates reflecting only the changes thereafter. The file can also be provided in a format that will load into Second Decimal's PinPoint application for tax calculation on purchases, or delivered in any other required format.

Formerly   
The point where tax becomes strategy.
